DEPARTMENT OF ELECTRICAL & ELECTRONICS

SUMMARY REPORT OF Importancy of Earthing

Earthing is used to protect you from an electric shock. It does this by providing a path (a protective conductor) for a fault current to flow to earth. It also causes the protective device (either a circuit-breaker or fuse) to switch off the electric current to the circuit that has the fault.

The Mechanical engineers serve all other branches of engineering directly or indirectly. The Mechanical engineers can find their place in Automobile engineering sector, Steel Plants, Power plants, Software industries, Manufacturing industries, Design industries, Military, Naval and Air force, Defense research organizations, Material research organizations etc.

About the Workshop

CATIA delivers the unique ability not only to model any product, but to do so in the context of its real-life behavior design in the age of experience. CATIA (Computer-Aided Three dimensional Interactive Application) software is a complete multi-platform solution for computer-aided design, manufacturing, engineering, 3D and PLM. Marketed by manufacturer Dassault Systemes, the software is ideal for creating solids, surfaces, assemblies, drawings, fabrication and analysis. However, CATIA offers more advanced functionality for surfaces and modules for different industries.

About the College

As an Institute committed in quality education, MIST aims at providing learning with a Technology-edge. It endeavors to provide consistent training to its students to help them evolve as competent professionals in the highly competitive world. Right from its inception in 2001, it has been tuning itself to meet this objective. A new civilization is emerging in our lives. This civilization belongs with a new way of working. Millions are already tuning their lives to the rhythms of tomorrow.

About Mechanical Dept.

The Mechanical engineering is one of the core engineering departments, which has potential to accommodate all efficient engineers. The Mechanical engineers serve all other branches of engineering directly or indirectly. The Mechanical engineers can find their place in Automobile engineering sector, Steel Plants, Power plants, Software industries, Manufacturing industries, Design industries, Military, Naval and Air force, Defense research organizations, Material research organizations etc.

About the Workshop

The course builds from the big ideas in finite element analysis and computational fluid dynamics to ANSYS case studies that progress from real world applications and examples. ANSYS is the flagship engineering software solution that uses finite element analysis (FEA), which is a numerical and computational method used to solve the real engineering problems related to physics, structural analysis, heat transfer, fluid flow, mass transport, and electromagnetic potential field. To solve the problem, it subdivides a large problem into smaller, simpler parts that are called finite elements and solve the problem by minimizing an associated error function.

Technical Training Exam on ANSYS Software (A.Y-2016-2017)

2x10=20 Marks

Answer All the Questions

1. Given the 2D truss structure represented in Figure 1.1, where:
- $h = 5$ m
 - $L = 3$ m
 - $P = 1000$ N
 - $E = 1.0 \times 10^9$ N/m² (Young's modulus)
 - $A = 0.1$ m² (Cross-section area of each beam element)

Figure 1.1: Example truss structure, constraints and loads

2.

- 7.13 Determine the stresses in the plate with the hole subjected to the tensile stress shown in Figure P7-13. Graph the stress variation σ_x versus the distance y from the hole. Let $E = 200$ GPa, $\nu = 0.25$, and $r = 25$ mm. (Use various mesh densities, depending on your computer program in your finite element model.) Use symmetry as appropriate.

ANSYS COURSE Summary

Department of Mechanical Engineering

1. The Geometry preparation training course is for users who want to create and modify geometry in preparation for CFD or FEA analysis. The training will be focused in either ANSYS Design Modeler or ANSYS Space Claim.
2. The ANSYS Meshing training course will give you the tools for generating good quality meshes for Fluent and CFX. The trainee will choose which tool should be used: ANSYS Meshing, Fluent Meshing or ICEM CFD.
3. This course will show how to set up a range of simulation types in the ANSYS Fluent or ANSYS CFX solver, as well as how to post process the results by using our CFD Post Tool.
4. This course will show how to set up a range of simulation types in ANSYS Mechanical, as well as how to post process and evaluate your results.
5. To acquire advance knowledge to perform explicit simulations with ANSYS Explicit STR, ANSYS AUTODYN or ANSYS LS-DYNA.
6. This is an introductory to intermediate level training for using ANSYS HFSS for all applications, like RF/microwave, antennas or planar problems. Participants will get understanding of HFSS modeling, solution process and post-processing features, which can be used for other advanced applications. The course will also cover advanced topics like dynamic link between EM and circuit, impedance matching, overview of HFSS 3D layout interface and speeding-up HFSS simulation using HPC.
7. Provide the needed tools for the complete simulation of a pressure Vessel from scratch. Several types of analysis and boundary conditions will be discussed, by using pressure vessels examples.
8. To acquire advance knowledge for performing mechanical simulation in Fixed Offshore Structures.

SUMMARY REPORT OF Technical Training MS-Office

The purpose of the **MS Word** is to allow the users to type and save documents.

Microsoft **word** is used to save documents.

The documents can be copied to flash drive which serves as an external memory for your computer.

This allows you to use the saved documents conveniently taking with you anywhere.

MS Excel is a spreadsheet programme developed by Microsoft in 1985, with the sole purpose of helping businesses compile all their financial data, yearly credit, and yearly debit sheets.

Fast forward to the future after 31 years, it is now the most commonly used program for creating graphs and pivot tables.

Making your presentation more interesting through the use of multimedia can help to improve the audience's focus.

PowerPoint allows you to use images, audio and video to have a greater visual impact.

These visual and audio cues may also help a presenter be more improvisational and interactive with the audience.

DEPARTMENT OF ELECTRONICS AND COMMUNICATION ENGINEERING

SUMMARY REPORT OF Cloud computing

Cloud computing is perhaps the most flamboyant technological innovation of the 21st century.

This is because it has seen the fastest adoption into the mainstream than any other technology in the domain.

This adoption has been fueled mainly by the ever-increasing number of smart phones and mobile devices that can access the internet.

Cloud computing is not just for organizations and businesses; it's also useful for the average person as well.

It enables us to run software programs without installing them on our computers; it enables us to store and access our multimedia content via the internet, it enables us to develop and test programs without necessarily having servers and so on.

Hadoop is an open source platform that provides excellent data management provision.

It is a framework that supports the processing of large data sets in a distributed computing environment.

It is designed to expand from single servers to thousands of machines, each providing computation and storage.

Its distributed file system facilitates rapid data transfer rates among nodes and allows the system to continue operating uninterrupted in case of a node failure, which minimizes the risk of catastrophic system failure, even if a significant number of nodes become out of action.

SUMMARY REPORT OF Technical Training MS-Office

The purpose of the **MS Word** is to allow the users to type and save documents.

Microsoft **word** is used to save documents.

The documents can be copied to flash drive which serves as an external memory for your computer.

This allows you to use the saved documents conveniently taking with you anywhere.

MS Excel is a spreadsheet programme developed by Microsoft in 1985, with the sole purpose of helping businesses compile all their financial data, yearly credit, and yearly debit sheets.

Fast forward to the future after 31 years, it is now the most commonly used program for creating graphs and pivot tables.

Making your presentation more interesting through the use of multimedia can help to improve the audience's focus.

PowerPoint allows you to use images, audio and video to have a greater visual impact.

These visual and audio cues may also help a presenter be more improvisational and interact with the audience.

SUMMARY REPORT OF Cloud computing with HADOOP FRAMEWORK

Cloud computing is perhaps the most flamboyant technological innovation of the 21st century. This is because it has seen the fastest adoption into the mainstream than any other technology in the domain.

This adoption has been fueled mainly by the ever-increasing number of smart phones and mobile devices that can access the internet.

Cloud computing is not just for organizations and businesses; it's also useful for the average person as well.

It enables us to run software programs without installing them on our computers; it enables us to store and access our multimedia content via the internet, it enables us to develop and test programs without necessarily having servers and so on.

Hadoop is an open source platform that provides excellent data management provision. It is a framework that supports the processing of large data sets in a distributed computing environment.

It is designed to expand from single servers to thousands of machines, each providing computation and storage.

Its distributed file system facilitates rapid data transfer rates among nodes and allows the system to continue operating uninterrupted in case of a node failure, which minimizes the risk of catastrophic system failure, even if a significant number of nodes become out of action.

Course :Multi rotor Drone Pilot Course

Report summary

A multirotor or multicopter is a rotorcraft with more than two lift-generating rotors. An advantage of multirotor aircraft is the simpler rotor mechanics required for flight control. Unlike single- and double-rotor helicopters which use complex variable pitch rotors whose pitch varies as the blade rotates for flight stability and control, multirotors often use fixed-pitch blades; control of vehicle motion is achieved by varying the relative speed of each rotor to change the thrust and torque produced by each.

There are four main physical types of professional drones: multi-rotor, fixed-wing, single-rotor helicopter, and fixed-wing hybrid VTOL. The different body styles of each type of drone contribute to the amount of weight they can carry (payload), efficiency and duration of the flight.

SUMMARY REPORT OF CERTIFICATE COURSE ON ATOMIC STRUCTURE

Atoms consist of protons and neutrons in the nucleus, surrounded by electrons that reside in orbitals. Orbitals are classified according to the four quantum numbers that represent any one particular orbital's energy, shape, orientation, and the spin of the occupying electron. The first section of this SparkNote on Atomic Structure will focus on the electron and the mechanism of describing electrons and their orbitals. As we shall see in the second section, electrons fill up orbitals in a systematic fashion, following the rules of the Aufbau principle. The configuration of electrons in an atom play a vital role in chemistry. Virtually every chemical process relies on the interactions of electrons between atoms, most particularly on the tendency of atoms to follow the octet rule, the tendency to gain a full valence shell electrons. In the second section of this SparkNote, we will discuss the properties of electrons, distinguishing between valence electrons and inner electrons, then broadening the discussion into an examination of the properties of electron configurations.

DEPARTMENT OF ELECTRICAL & ELECTRONICS

SUMMARY REPORT OF Electrical Installation Standards

The study of a proposed electrical installation requires an adequate understanding of all governing rules and regulations. A list of most common IEC standards is provided.

The total power demand can be calculated based on the location and power of each load, together with the knowledge of the operating modes (steady state demand, starting conditions, non simultaneous operation, etc.).

The power and number of sources required to supply the electrical installation is readily obtained, also taking into account local tariff structures, to allow the best choice of connection arrangement to the power-supply network, e.g. at medium voltage or low voltage level.

About the College

As an Institute committed in quality education, MIST aims at providing learning with a Technology-edge. It endeavors to provide consistent training to its students to help them evolve as competent professionals in the highly competitive world. Right from its inception in 2001, it has been tuning itself to meet this objective. A new civilization is emerging in our lives. This civilization belongs with a new way of working. Millions are already tuning their lives to the rhythms of tomorrow.

About Mechanical Dept.

The Mechanical engineering is one of the core engineering departments, which has potential to accommodate all efficient engineers. The Mechanical engineers serve all other branches of engineering directly or indirectly. The Mechanical engineers can find their place in Automobile engineering sector, Steel Plants, Power plants, Software industries, Manufacturing industries, Design industries, Military, Naval and Air force, Defense research organizations, Material research organizations etc.

About the Workshop

The course builds from the big ideas in finite element analysis and computational fluid dynamics to ANSYS case studies that progress from real world applications and examples. ANSYS is the flagship engineering software solution that uses finite element analysis (FEA), which is a numerical and computational method used to solve the real engineering problems related to physics, structural analysis, heat transfer, fluid flow, mass transport, and electromagnetic potential field. To solve the problem, it subdivides a large problem into smaller, simpler parts that are called finite elements and solve the problem by minimizing an associated error function.

Technical Training Exam on ANSYS Software (A.Y-2017-2018)

2x10=20 Marks

Answer All the Questions

1.

Given the 2D truss structure represented in Figure 1.1, where:

- $h = 5 \text{ m}$
- $L = 5 \text{ m}$
- $F = 1000 \text{ N}$
- $E = 1.0 \times 10^8 \text{ N/m}^2$ (Young's modulus)
- $A = 0.1 \text{ m}^2$ (Cross-section area of each beam element)

Figure 1.1: Example truss structure, constraints and loads.

2.

- 7.13 Determine the stresses in the plate with the hole subjected to the tensile stress shown in Figure P7-13. Graph the stress variation σ_x versus the distance y from the hole. Let $E = 200 \text{ GPa}$, $\nu = 0.25$, and $t = 25 \text{ mm}$. (Use various mesh densities, depending on your computer program in your finite element model.) Use symmetry as appropriate.

ANSYS COURSE Summary

Department of Mechanical Engineering

1. The Geometry preparation training course is for users who want to create and modify geometry in preparation for CFD or FEA analysis. The training will be focused in either ANSYS Design Modeler or ANSYS Space Claim.
2. The ANSYS Meshing training course will give you the tools for generating good quality meshes for Fluent and CFX. The trainee will choose which tool should be used: ANSYS Meshing, Fluent Meshing or ICEM CFD.
3. This course will show how to set up a range of simulation types in the ANSYS Fluent or ANSYS CFX solver, as well as how to post process the results by using our CFD Post Tool.
4. This course will show how to set up a range of simulation types in ANSYS Mechanical, as well as how to post process and evaluate your results.
5. To acquire advance knowledge to perform explicit simulations with ANSYS Explicit STR, ANSYS AUTODYN or ANSYS LS-DYNA.
6. This is an introductory to intermediate level training for using ANSYS HFSS for all applications, like RF/microwave, antennas or planar problems. Participants will get understanding of HFSS modeling, solution process and post-processing features, which can be used for other advanced applications. The course will also cover advanced topics like dynamic link between EM and circuit, impedance matching, overview of HFSS 3D layout interface and speeding-up HFSS simulation using HPC.
7. Provide the needed tools for the complete simulation of a pressure Vessel from scratch. Several types of analysis and boundary conditions will be discussed, by using pressure vessels examples.
8. To acquire advance knowledge for performing mechanical simulation in Fixed Offshore Structures.

SUMMARY REPORT OF Training - C programming

C is robust language and has rich set of built-in functions, data types and operators which can be used to write any complex program.

Program written in C are efficient due to availability of several data types and operators.

C is good choice for system-level programming. Nevertheless, it is not perfect for all programmers and all situations.

C pointers are a common source of confusion and programming errors.

C also lacks explicit support for useful abstractions such as classes and objects.

That may be a reason C is not preferable language for application-level programming. Newer languages such as C++ and Java address these issues for application-level programs.

C programming language is not limited to but used widely in operating systems, language compilers, network drivers, language interpreters, and system utilities areas of development.

SUMMARY REPORT OF Java Certification Programme

Java is one of the most popular programming languages used to create Web applications and platforms. It was designed for flexibility, allowing developers to write code that would run on any machine, regardless of architecture or platform.

Java is designed to be concurrent, class-based and object-oriented, as well as a computing platform.

First released by Sun Microsystems in 1995, an enormous amount of applications and websites

will not work unless you have Java installed, and more are created every day.

Java is advertised, and esteemed for its fast performance, security, and reliability.

DEPARTMENT OF INFORMATION TECHNOLOGY

SUMMARY REPORT OF Training - C programming

C is robust language and has rich set of built-in functions, data types and operators which can be used to write any complex program.

Program written in C are efficient due to availability of several data types and operators.

C is good choice for system-level programming. Nevertheless, it is not perfect for all programmers and all situations.

C pointers are a common source of confusion and programming errors.

C also lacks explicit support for useful abstractions such as classes and objects.

That may be a reason C is not preferable language for application-level programming.

Newer languages such as C++ and Java address these issues for application-level programs.

C programming language is not limited to but used widely in operating systems, language compilers, network drivers, language interpreters, and system utilities areas of development.

SUMMARY REPORT OF Java Certification Programme

Java is one of the most popular programming languages used to create Web applications and platforms. It was designed for flexibility, allowing developers to write code that would run on any machine, regardless of architecture or platform.

Java is designed to be concurrent, class-based and object-oriented, as well as a computing platform first released by Sun Microsystems in 1995. An enormous amount of applications and websites will not work unless you have Java installed, and more are created every day.

Java is advertised, and esteemed for its fast performance, security, and reliability.

DEPARTMENT OF HUMANITIES AND SCIENCES

SUMMARY REPORT OF ULTRASONICS

Ultrasonics, Vibrational or stress waves in elastic media that have a frequency above 20 kilohertz, the highest frequency of sound waves that can be detected by the human ear. They can be generated or detected by piezoelectric transducers (*see* piezoelectricity). High-power ultrasonics produce distortion in a medium; applications include ultrasonic welding, drilling, irradiation of fluid suspensions (as in wine clarification), cleaning of surfaces (such as jewelry), and disruption of biological structures. Low-power ultrasonic waves do not cause distortions; uses include sonar, structure testing, and medical imaging and diagnosis. Some animals, including [bats](#), employ ultrasonic echolocation for navigation.

The Mechanical engineers can find their place in Automobile engineering sector, Steel Plants, Power plants, Software industries, Manufacturing industries, Design industries, Military, Naval and Air force, Defense research organizations, Material research organizations etc.

About the Workshop

CATIA delivers the unique ability not only to model any product, but to do so in the context of its real-life behavior: design in the age of experience. CATIA (Computer-Aided Three dimensional Interactive Application) software is a complete multi-platform solution for computer-aided design, manufacturing, engineering, 3D and PLM. Marketed by manufacturer Dassault Systemes, the software is ideal for creating solids, surfaces, assemblies, drawings, fabrication and analysis. However, CATIA offers more advanced functionality for surfaces and modules for different industries.

CATIA COURSE

Summary

- In this course, you will learn how to utilize the core functionality enhancements in Catia.
- First, you will become familiar with using and customizing the new ribbon interface in Catia.
- The new measure and sectioning interfaces will also be examined. Next, you will become familiar with the Sketcher workflow and reference enhancements.
- Part modeling enhancements to features such as Extrude, Corner Chamfer, Sweeps, Blends, and Datum Curves will then be examined.
- You will also learn about new and enhanced Assembly capabilities, such as selecting multiple components, the new relationship constraints, and enhancements for dragging components.
- Then, you will examine the new Table and Balloon functionality for 2-D drawings, and review various detailing enhancements.
- At the end of each module, you will complete a set of review questions to reinforce critical topics from that module. At the end of the course, you will complete a course assessment in Catia intended to evaluate your understanding of the course as a whole.

About the College

As an Institute committed in quality education, MIST aims at providing learning with a Technology-edge. It endeavors to provide consistent training to its students to help them evolve as competent professionals in the highly competitive world. Right from its inception in 2001, it has been tuning itself to meet this objective. A new civilization is emerging in our lives. This civilization belongs with a new way of working. Millions are already tuning their lives to the rhythms of tomorrow.

About the Mechanical Dept.

The Mechanical engineering is one of the core engineering departments, which has potential to accommodate all efficient engineers. The Mechanical engineers serve all other branches of engineering directly or indirectly. The Mechanical engineers can find their place in Automobile engineering sector, Steel Plants, Power plants, Software industries, Manufacturing industries, Design industries, Military, Naval and Air force, Defense research organizations, Material research organizations etc.

About the Workshop

The course builds from the big ideas in finite element analysis and computational fluid dynamics to ANSYS case studies that progress from real world applications and examples. ANSYS is the flagship engineering software solution that uses finite element analysis (FEA), which is a numerical and computational method used to solve the real engineering problems related to physics, structural analysis, heat transfer, fluid flow, mass transport, and electromagnetic potential field. To solve the problem, it subdivides a large problem into smaller, simpler parts that are called finite elements and solve the problem by minimizing an associated error function.

Technical Training Exam on ANSYS Software
(A.Y-2018-2019)

2x10=20 Marks

Answer All the Questions

1.

Given the 2D truss structure represented in Figure 1.1, where:

- $h = 5 \text{ m}$
- $L = 5 \text{ m}$
- $P = 1000 \text{ N}$
- $E = 1.0 \times 10^8 \text{ N/m}^2$ (Young's modulus)
- $A = 0.1 \text{ m}^2$ (Cross-section area of each beam element)

Figure 1.1: Example truss structure, constraints and loads.

2.

- 7.13 Determine the stresses in the plate with the hole subjected to the tensile stress shown in Figure P7-13. Graph the stress variation σ_x versus the distance y from the hole. Let $E = 200 \text{ GPa}$, $\nu = 0.25$, and $r = 25 \text{ mm}$. (Use various mesh densities, depending on your computer program in your finite element model.) Use symmetry as appropriate.

ANSYS COURSE

Summary

Department of Mechanical Engineering

1. The Geometry preparation training course is for users who want to create and modify geometry in preparation for CFD or FEA analysis. The training will be focused in either ANSYS Design Modeler or ANSYS Space Claim.
2. The ANSYS Meshing training course will give you the tools for generating good quality meshes for Fluent and CFX. The trainee will choose which tool should be used: ANSYS Meshing, Fluent Meshing or ICEM CFD
3. This course will show how to set up a range of simulation types in the ANSYS Fluent or ANSYS CFX solver, as well as how to post process the results by using our CFD Post Tool.
4. This course will show how to set up a range of simulation types in ANSYS Mechanical, as well as how to post process and evaluate your results.
5. To acquire advance knowledge to perform explicit simulations with ANSYS Explicit STR, ANSYS AUTODYN or ANSYS LS-DYNA
6. This is an introductory to intermediate level training for using ANSYS HFSS for all applications, like RF/microwave, antennas or planar problems. Participants will get understanding of HFSS modeling, solution process and post-processing features, which can be used for other advanced applications. The course will also cover advanced topics like dynamic link between EM and circuit, impedance matching, overview of HFSS 3D layout interface and speeding-up HFSS simulation using HPC.
7. Provide the needed tools for the complete simulation of a pressure Vessel from scratch. Several types of analysis and boundary conditions will be discussed, by using pressure vessels examples.
8. To acquire advance knowledge for performing mechanical simulation in Fixed Offshore Structures.

SUMMARY REPORT OF MATLAB PROGRAMMING

This course site is the result of several iterations of an introductory course I have given at MIT, the last of which was called DR. MATLAB. In that course I strived to change the usual pattern of teaching/learning MATLAB from a programming view point to a mathematical one. The idea is that by thinking about mathematical problems, students are prodded into learning MATLAB for the purpose of solving the problem at hand. The down-side to this approach is that it is somewhat based on the idea that people are already excited about mathematics, or can be excited about it. That said, as I taught the course at MIT, it was not a big problem. Variables, arrays, conditional statements, loops, functions, and plots are covered in a project-based style where much of the learning happens away from the classroom. Students are expected to spend about 4 hours per week on homework. At the end of the course, students should be able to use MATLAB in their own work, and be prepared to deepen their MATLAB programming skills and tackle other languages for computing, such as Java, C++, or Python.

SUMMARY REPORT OF PSPICE programming Certification

PSPICE is a circuit analysis tool that allows the user to simulate a circuit and extract key voltages and currents. Information is entered into PSPICE via one of two methods, they are a typed 'Net List' or by designing a visual a schematic which is transformed into a netlist. In this class we will look at both the net list and the schematics. However, to to fully utilize the schematics we must first understand and become familiar with designing the net list.

The Mechanical engineers serve all other branches of engineering directly or indirectly. The Mechanical engineers can find their place in Automobile engineering sector, Steel Plants, Power plants, Software industries, Manufacturing industries, Design industries, Military, Naval and Air force, Defense research organizations, Material research organizations etc.

About the Workshop

AutoCAD is globally used by surveyors, designers, engineers, drafters. Globally, AutoCAD has proven as an efficient and user-friendly Program. Program.Commercial drafting and computer-aided design(CAD) software applications are AutoCAD. AutoCAD software is recognized internationally for its remarkable editing capabilities, which make it likely to digitally draw building plans or recreate 3D images. AutoCAD is compatible with other applications like 3D Max. The designers can even import or export DWG & DXG Files to the application. Also, these files can even be exported from AutoCAD to other applications for creating more improved projects & presentations.

About the College

As an Institute committed in quality education, MIST aims at providing learning with a Technology-edge. It endeavors to provide consistent training to its students to help them evolve as competent professionals in the highly competitive world. Right from its inception in 2001, it has been tuning itself to meet this objective. A new civilization is emerging in our lives. This civilization belongs with a new way of working. Millions are already tuning their lives to the rhythms of tomorrow.

About the Mechanical Dept.

The Mechanical engineering is one of the core engineering departments, which has potential to accommodate all efficient engineers. The Mechanical engineers serve all other branches of engineering directly or indirectly. The Mechanical engineers can find their place in Automobile engineering sector, Steel Plants, Power plants, Software industries, Manufacturing industries, Design industries, Military, Naval and Air force, Defense research organizations, Material research organizations etc.

About the Workshop

The course builds from the big ideas in finite element analysis and computational fluid dynamics to ANSYS case studies that progress from real world applications and examples. ANSYS is the flagship engineering software solution that uses finite element analysis (FEA), which is a numerical and computational method used to solve the real engineering problems related to physics, structural analysis, heat transfer, fluid flow, mass transport, and electromagnetic potential field. To solve the problem, it subdivides a large problem into smaller, simpler parts that are called finite elements and solve the problem by minimizing an associated error function.

Technical Training Exam on ANSYS Software (A.Y-2019-2020)

2x10=20 Marks

Answer All the Questions

1.

Given the 2D truss structure represented in Figure 1.1, where:

- $h = 5 \text{ m}$
- $L = 5 \text{ m}$
- $F = 1000 \text{ N}$
- $E = 1.0 \times 10^8 \text{ N/m}^2$ (Young's modulus)
- $A = 0.1 \text{ m}^2$ (Cross-section area of each beam element)

Figure 1.1: Example truss structure, constraints and loads.

2.

7.13

Determine the stresses in the plate with the hole subjected to the tensile stress shown in Figure P7-13. Graph the stress variation σ_x versus the distance y from the hole. Let $E = 200 \text{ GPa}$, $\nu = 0.25$, and $r = 25 \text{ mm}$. (Use various mesh densities, depending on your computer program in your finite element model.) Use symmetry as appropriate.

ANSYS COURSE Summary

Department of Mechanical Engineering

1. The Geometry preparation training course is for users who want to create and modify geometry in preparation for CFD or FEA analysis. The training will be focused in either ANSYS Design Modeler or ANSYS Space Claim.
2. The ANSYS Meshing training course will give you the tools for generating good quality meshes for Fluent and CFX. The trainee will choose which tool should be used: ANSYS Meshing, Fluent Meshing or ICEM CFD.
3. This course will show how to set up a range of simulation types in the ANSYS Fluent or ANSYS CFX solver, as well as how to post process the results by using our CFD Post Tool.
4. This course will show how to set up a range of simulation types in ANSYS Mechanical, as well as how to post process and evaluate your results.
5. To acquire advance knowledge to perform explicit simulations with ANSYS Explicit STR, ANSYS AUTODYN or ANSYS LS-DYNA.
6. This is an introductory to intermediate level training for using ANSYS HFSS for all applications, like RF/microwave, antennas or planar problems. Participants will get understanding of HFSS modeling, solution process and post-processing features, which can be used for other advanced applications. The course will also cover advanced topics like dynamic link between EM and circuit, impedance matching, overview of HFSS 3D layout interface and speeding-up HFSS simulation using HPC.
7. Provide the needed tools for the complete simulation of a pressure Vessel from scratch. Several types of analysis and boundary conditions will be discussed, by using pressure vessel examples.
8. To acquire advance knowledge for performing mechanical simulation in Fixed Offshore Structures.

SUMMARY REPORT OF Oracle Java Certification

Oracle is a database that delivers excellent performance when challenged with demanding tasks.

The ACID test, which is an important tool used to ensure the integrity of data stored, was easily passed by Oracle databases.

This test is important since reliable data storage is the main purpose of a database.

Java is one of the most popular programming languages used to create Web applications and platforms.

It was designed for flexibility, allowing developers to write code that would run on any machine, regardless of architecture or platform.

SUMMARY REPORT OF SOFTSKILLS

Soft skills, also known as common skills or core skills, are skills which are desirable in all professions. These include critical thinking, problem solving, public speaking, professional writing, teamwork, digital literacy, leadership, professional attitude, work ethic, career management and intercultural fluency. This is in contrast to hard skills, which are specific to individual professions. The word "skill" highlights the practical function. The term alone has a broad meaning, and describes a particular ability to complete tasks ranging from easier ones like "learning how to kick a ball" to harder ones like "learning how to be creative". In this specific instance, the word "skill" has to be interpreted as the ability to master hardly controlled actions.

About the Mechanical Department

The Mechanical engineering is one of the core engineering departments, which has potential to accommodate all efficient engineers. The Mechanical engineers serve all other branches of engineering directly or indirectly. The Mechanical engineers can find their place in Automobile engineering sector, Steel Plants, Power plants, Software industries, Manufacturing industries, Design industries, Military, Naval and Air force, Defense research organizations, Material research organizations etc.

About the Workshop

AutoCAD is globally used by surveyors, designers, engineers, drafters. Globally, AutoCAD has proven as an efficient and user-friendly Program. Program.Commercial drafting and computer-aided design(CAD) software applications are AutoCAD. AutoCAD software is recognized internationally for its remarkable editing capabilities, which make it likely to digitally draw building plans or recreate 3D images. AutoCAD is compatible with other applications like 3D Max. The designers can even import or export DWG & DXG Files to the application. Also, these files can even be exported from AutoCAD to other applications for creating more improved projects & presentations.

About the Workshop

CATIA delivers the unique ability not only to model any product, but to do so in the context of its real-life behavior design in the age of experience. CATIA (Computer-Aided Three dimensional Interactive Application) software is a complete multi-platform solution for computer-aided design, manufacturing, engineering, 3D and PLM. Marketed by manufacturer Dassault Systemes, the software is ideal for creating solids, surfaces, assemblies, drawings, fabrication and analysis. However, CATIA offers more advanced functionality for surfaces and modules for different industries.

About the College

As an Institute committed in quality education, MIST aims at providing learning with a Technology-edge. It endeavors to provide consistent training to its students to help them evolve as competent professionals in the highly competitive world. Right from its inception in 2001, it has been tuning itself to meet this objective. A new civilization is emerging in our lives. This civilization belongs with a new way of working. Millions are already tuning their lives to the rhythms of tomorrow.

About Mechanical Dept.

The Mechanical engineering is one of the core engineering departments, which has potential to accommodate all efficient engineers. The Mechanical engineers serve all other branches of engineering directly or indirectly. The Mechanical engineers can find their place in Automobile engineering sector, Steel Plants, Power plants, Software industries, Manufacturing industries, Design industries, Military, Naval and Air force, Defense research organizations, Material research organizations etc.

About the Workshop

The course builds from the big ideas in finite element analysis and computational fluid dynamics to ANSYS case studies that progress from real world applications and examples. ANSYS is the flagship engineering software solution that uses finite element analysis (FEA), which is a numerical and computational method used to solve the real engineering problems related to physics, structural analysis, heat transfer, fluid flow, mass transport, and electromagnetic potential field. To solve the problem, it subdivides a large problem into smaller, simpler parts that are called finite elements and solve the problem by minimizing an associated error function.

Technical Training Exam on ANSYS Software (A.Y-2020-21)

2x10=20 Marks

Answer All the Questions

1.

Given the 2D truss structure represented in Figure 1.1, where:

- $h = 5 \text{ m}$
- $L = 5 \text{ m}$
- $F = 1000 \text{ N}$
- $E = 1.0 \times 10^7 \text{ N/m}^2$ (Young's modulus)
- $A = 0.1 \text{ m}^2$ (Cross-section area of each beam element)

Figure 1.1: Example truss structure, constraints and loads.

2.

- 7.13 Determine the stresses in the plate with the hole subjected to the tensile stress shown in Figure P7-13. Graph the stress variation σ_x versus the distance y from the hole. Let $E = 200 \text{ GPa}$, $\nu = 0.25$, and $t = 25 \text{ mm}$. (Use various mesh densities, depending on your computer program in your finite element model.) Use symmetry as appropriate.

ANSYS COURSE Summary

Department of Mechanical Engineering

1.The Geometry preparation training course is for users who want to create and modify geometry in preparation for CFD or FEA analysis. The training will be focused in either ANSYS Design Modeler or ANSYS Space Claim.

2. The ANSYS Meshing training course will give you the tools for generating good quality meshes for Fluent andCFX. The trainee will choose which tool should be used: ANSYS Meshing, Fluent Meshing or ICFM CFD

3. This course will show how to set up a range of simulation types in the ANSYS Fluent or ANSYS CFX solver, aswell as how to post process the results by using our CFD Post Tool.

4. This course will show how to set up a range of simulation types in ANSYS Mechanical, as well as how to post process and evaluate your results.

5. To acquire advance knowledge to perform explicit simulations with ANSYS Explicit STR, ANSYS AUTODYN or ANSYS LS-DYNA

6. This is an introductory to intermediate level training for using ANSYS HFSS for all applications, like RF/microwave, antennas or planar problems. Participants will get understanding of HFSS modeling, solution process and post-processing features, which can be used for other advanced applications. The course will also cover advanced topics like dynamic link between EM and circuit, impedance matching, overview of HFSS 3Dlayout interface and speeding-up HFSS simulation using HPC.

7. Provide the needed tools for the complete simulation of a pressure Vessel from scratch. Several types of analysis and boundary conditions will be discussed, by using pressure vessels examples.

8.To acquire advance knowledge for performing mechanical simulation in Fixed Offshore Structures.

3D-PRINTING COURSE

Summary

Department of Mechanical Engineering

1. 3D Printing uses software that slices the 3D model into layers (0.01mm thick or less in most cases). Each layer is then traced onto the build plate by the printer, once the pattern is completed, the build plate is lowered and the next layer is added on top of the previous one.

2. Layer by layer production allows for much greater flexibility and creativity in the design process. No longer do designers have to design for manufacture, but instead they can create a part that is lighter and stronger by means of better design. Parts can be completely re-designed so that they are stronger in the areas that they need to be and lighter overall.

3. 3D Printing significantly speeds up the design and prototyping process. There is no problem with creating one part at a time, and changing the design each time it is produced. Parts can be created within hours. Bringing the design cycle down to a matter of days or weeks compared to months. Also, since the price of 3D printers has decreased over the years, some 3D printers are now within financial reach of the ordinary consumer or small company.

4. Typical manufacturing techniques are known as 'Subtractive Manufacturing' because the process is one of removing material from a preformed block. Processes such as Milling and Cutting are subtractive manufacturing techniques. This type of process creates a lot of waste since the material that is cut off generally cannot be used for anything else and is simply sent out as scrap.

It endeavors to provide consistent training to its students to help them evolve as competent professionals in the highly competitive world. Right from its inception in 2001, it has been tuning itself to meet this objective. A new civilization is emerging in our lives. This civilization brings with it a new way of working. Millions are already tuning their lives to the rhythms of tomorrow.

About the Mechanical Dept.

The Mechanical engineering is one of the core engineering departments, which has potential to accommodate all efficient engineers. The Mechanical engineers serve all other branches of engineering directly or indirectly. The Mechanical engineers can find their place in Automobile engineering sector, Steel Plants, Power plants, Software industries, Manufacturing industries, Design industries, Military, Naval and Air force, Defense research organizations, Material research organizations etc.

About the Workshop

This course will make one familiar with the operating process, manual programming, computer assisted programming, tool & work setting and Product machining. Manufacturing trend has made a quantum leap towards CNC (Computer Numerical Control) from conventional methods. Industry is in great need of professionals with thorough CNC Programming knowledge in India and Abroad. CTC a newly started state-of-the-art training centre, offers high end training in cnc programming and cnc machining.

SUMMARY REPORT OF PYTHON PROGRAMMING

- Python programming language is considered as simple language as it extracts most of the concepts of C and Java in terms of syntax.
- Python programming is used to learn how to design, program the python applications and explains how to use lists, tuples and dictionaries in python programs
- It explains how to identify python object types to use indexing and slicing to access data and also to define the structure and components of a python program
- It contains the concepts of loops and decision control statements and a parameter passing techniques
- It explains the concepts of packages and to read write into the python file, has beautiful concepts of inheriting a class and ability to handle the exceptions

- Python programming is used to learn how to design, program the python applications and explains how to use lists, tuples and dictionaries in python programs
- It explains how to identify python objet types to use indexing and slicing to access data and also to define the structure and components of a python program
- It contains the concepts of loops and decision control statements and a parameter passing techniques
- It explains the concepts of packages and to read write into the python file, has beautiful concepts of inheriting a class and ability to handle the exceptions

Course : Micro Category Multi rotor Drone Pilot Course

Report summary

A multirotor or multicopter is a rotorcraft with more than two lift-generating rotors. An advantage of multirotor aircraft is the simpler rotor mechanics required for flight control. Unlike single- and double-rotor helicopters which use complex variable pitch rotors whose pitch varies as the blade rotates for flight stability and control, multirotors often use fixed-pitch blades; control of vehicle motion is achieved by varying the relative speed of each rotor to change the thrust and torque produced by each.

There are four main physical types of professional drones: multi-rotor, fixed-wing, single-rotor helicopter, and fixed-wing hybrid VTOL. The different body styles of each type of drone contribute to the amount of weight they can carry (payload), efficiency and duration of the flight.

SUMMARY REPORT ON ADD ON COURSE(ULTRASONICS)

ultrasonics, Vibrational or stress waves in elastic media that have a frequency above 20 kilohertz, the highest frequency of sound waves that can be detected by the human ear. They can be generated or detected by piezoelectric transducers (*see* piezoelectricity). High-power ultrasonics produce distortion in a medium; applications include ultrasonic welding, drilling, irradiation of fluid suspensions (as in wine clarification), cleaning of surfaces (such as jewelry), and disruption of biological structures. Low-power ultrasonic waves do not cause distortions; uses include sonar, structure testing, and medical imaging and diagnosis. Some animals, including [bats](#), employ ultrasonic echolocation for navigation.
